

MOBIUS APPROACH TO IT GOVERNANCE

While Information Technology (IT) is fundamental to the support and growth of any business, it's all too easy to focus on specific technologies to the detriment of your enterprise's foundation. Retrofitting is difficult, time-consuming and expensive, and impedes the momentum you were trying to build in the first place. Thus, as technology and information become increasingly important to your business, so too does the need for well-governed processes to manage these key areas sustainably. This is why IT Governance should form an integral part of your Corporate Governance.

IT Governance is a set of management practices that (1) help you align IT strategy with business strategy; (2) enable accountability for the performance and risk management of IT; (3) ensure the focus on value delivery by IT during day-to-day operations; (4) facilitate the implementation of standardised and practical IT policies, standards and procedures; and (5) optimise the communications within IT – as well as between IT and its stakeholders.

Mobius will help you put all of this in place. Crucially, our approach is risk-based, prioritising key areas and enabling quick wins for your business. And while everything we do is based on global best practices, we also carefully tailor our solutions for your unique requirements, ensuring their sustainability.

THE MOBIUS ADVANTAGE

EXPERTISE

- Extensive IT risk and governance experience across various industries
- Skills transfer
- COBIT 5
- Information Technology Infrastructure Library (ITIL)
- Certified in Risk and Information Systems Controls (CRISC)
- Certified in Governance of Enterprise IT (CGEIT)
- Information Security and Privacy certifications

APPROACH

- Practical, structured and simple methodology for easy adoption
- Focused on helping you balance the opposing forces of performance and risk
