

CYBER SECURITY THREAT ASSESSMENT

Cyber Security attacks are on the rise across all business sectors and estimated to cost the world around \$10.5 trillion annually by 2025. Against the ever-increasing impact and sophistication of Cyber Security attacks, organisations are under pressure to both prioritise Cyber Security spending, and simultaneously ensure that budget is used efficiently to prevent the organisation from becoming a victim.

The key to effective and efficient Cyber Security threat management is to first understand what you are up against.

Our approach starts with identifying the critical processes and assets supporting your business, understanding attackers' motivations, and determining the most likely attacks against those assets and your organisation.

This Threat Profile is then used to assess controls necessary to safeguard what matters most to your business. We assess what controls are in place to protect against the cyber threats applicable to your own organisation, and develop a prioritised remediation plan that takes into account scarce human, financial and technical resources.

BENEFITS

IDENTIFY

Understanding of threats and attack methods that could be used to compromise your organisation's critical systems.

PRIORITISE

Prioritised spending on Cyber Security with a clear improvement roadmap.

PROTECT

Improved capability to protect against and monitor for the threats that are applicable to your organisation.

UNDERSTAND THE BUSINESS

We work with your key stakeholders to understand your organisation, core business functions, and the critical IT assets that support the day-to-day operations of your business.

IDENTIFY THREATS (THREAT PROFILE)

We assist you to determine which threats and attack scenarios can affect your key business operations and systems, while also considering financial, reputational and other cyber-related risks.

CYBER SECURITY CONTROLS REVIEW

We examine your Cyber Security controls, security systems and processes to determine whether your organisation is adequately prepared to protect, prevent, respond and recover from the threats.

OUR APPROACH

THREAT MONITORING REVIEW

We review your organisation's use of monitoring and threat information to identify whether attack methods are detectable by your defense systems.

ROADMAP DEVELOPMENT

Based on the threat profile and the controls assessment, we develop a roadmap and high-level plans that consider factors such as quick wins, optimal use of existing controls, fine-tuning monitoring and developing longer term enhanced protection capabilities.

THE END RESULT

You have a clear picture of the threats that are applicable to your organisation, how these threats would compromise and impact your operations, and a prioritised roadmap on how to improve your Cyber Security resilience against the threats.
